

## **Feuer, Zoom und Schattenplätze: Architekturen menschlicher Interaktion in der Evolution**

Kenan Hochuli (Universität Zürich)

Face-to-face interaction is considered the 'natural ecological niche' of language (Schegloff 2006). However, this niche has significantly evolved throughout human history. While social interaction was once confined to "natural ecologies," it now occurs within complex, purpose-built architectures.

To illuminate this evolution, I will showcase video sequences of macaque interactions in shaded areas, human activities around a fire, and social rituals in digital meetings on platforms like Zoom. These examples will help us examine the configurations of copresence that emerge from the interplay between architecture, temperature, and light.
